DELTA
TAPERED WEDGE CEMENTLESS STEM

Salient features of DELTA Stem:

- The DELTA stem is an evolution based on a clinically proven design principle with extensively documented results for over 25 years.
- Precision forged Ti-6Al-7Nb material will improve biocompatibility, fatigue strength and reduce elastic modulus.
- The tapered wedge design allows for enhanced fit and excellent functional outcome.
- Proximal porous coating promotes osseointegration in the proximal femur, creating a strong biological bond. This biological fixation provides better initial implant stability and reduces the risk of micro-motion.

Available with CCD angle of 127° in sizes from 0-8 in lengths ranging from 105mm to 146mm.
